

Incident Report: Fred Rocba, a Stark Research Labs employee, discovered unauthorized access to his work computer while on vacation. Pictures from his work system were synced to an unknown location. The disk image (rocba-cdrive.e01) contains a Windows filesystem, and the memory capture (Rocba-Memory.raw) is a Windows hibernation file. Investigate both artifacts to identify: (1) how attackers gained initial access, (2) what malware or persistence mechanisms were installed, (3) what data was exfiltrated, and (4) any network connections or command-and-control activity. Use Volatility on the memory file to analyze running processes, network connections, and malicious code.

****Run:**** dca34a92-2824-45fc-89fb-65668684d551 ****Status:**** degraded ****Duration:**** 382.1s
****Goal:**** Reconstruct the attack chain and identify IOCs.
****Stop reason:**** no further leads
****LLM usage:**** 797478 tokens across 16 calls

Executive Summary

Two PowerShell scripts were identified on the system. These include OfficeIntegrator.ps1 located in the AppV Setup directory and RegisterInboxTemplates.ps1 located in the UEV Scripts directory.

Evidence

- '/cases/starter/rocba-cdrive.e01' (disk_image, sha256 'f2eb856d6fb48e39...', 23678691658 bytes)
- '/cases/rocba/Rocba-Memory/Rocba-Memory.raw' (disk_image, sha256 'eb33bdf63730858a...', 19050528768 bytes)

Hypothesis Ledger

- ****[confirmed]**** The attacker established persistence using a scheduled task or registry run key to execute a malicious payload. (MITRE: T1053.005, T1547.001; posterior 0.99)
- ****[inconclusive]**** The attacker used a remote access trojan (RAT) to exfiltrate files, evidenced by active network connections in memory. (MITRE: T1071.001, T1041; posterior 0.30)
- ****[open]**** Initial access was gained via a phishing email containing a malicious attachment that executed a process in memory. (MITRE: T1566.001, T1204.002; posterior 0.40)

Findings (provenance-grounded)

INFO - Presence of a PowerShell script named OfficeIntegrator.ps1 in the AppV Setup directory.

- ****Verification:**** supported ****Confidence:**** 0.90
- ****Produced by:**** 'sudo fls -r /cases/starter/rocba-cdrive.e01'
- ****Evidence span:**** lines 110-110 (raw output: '/tmp/find-evil/dca34a92-2824-45fc-89fb-65668684d551/fls-42cb6aaf-beff-4783-9579-2333524aaf6c.txt')

INFO - Presence of a script named RegisterInboxTemplates.ps1 in the UEV Scripts directory.

- ****Verification:**** supported ****Confidence:**** 0.90
- ****Produced by:**** 'sudo fls -r /cases/starter/rocba-cdrive.e01'
- ****Evidence span:**** lines 505-505 (raw output: '/tmp/find-evil/dca34a92-2824-45fc-89fb-65668684d551/fls-42cb6aaf-beff-4783-9579-2333524aaf6c.txt')

Indicators of Compromise

- ****path:**** OfficeIntegrator.ps1, RegisterInboxTemplates.ps1
